Output Box

Hanna's design was made so the input box is to the left of the output box with the enter button directly below the input box. Her design's heading was adjacent to a bar of a contrasting colour that separates the heading from the content. My design had a simple heading at the top of the page, with the input box directly above the output box, clearly labelled. Hanna's instructions are below the heading while the instructions on my design are to the left of the page, both labelled clearly.

The final design we agreed on was a combination of both our designs with added features. The final design has the two tax boxes in the top right corner, with the instructions to the left of them. Directly below these two features is the graph and graph-information. We decided on using Hanna's heading, with the title capitalised and floating to the left, a quote directly beneath in italics. All the features are clearly labelled. We decided to combine the most simple elements of our designs to make a final design that will be easy for the user to access and use.

Both our flow charts for the scripting are relatively similar. However, adjustments will be made if necessary or an easier format is possible.

## Final Design:

[illegible]
